Release information

Release Version: 20.10.2

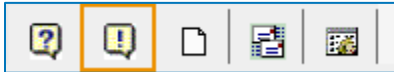

Date of Release: November 12, 2020

Introduction

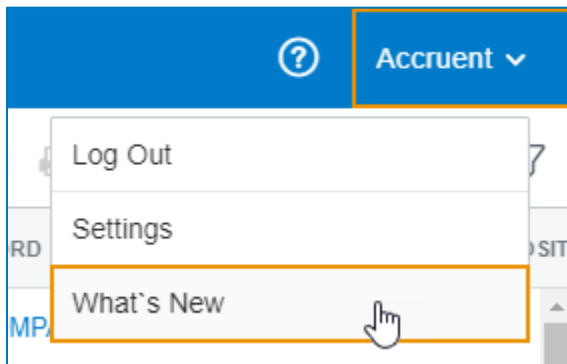

This document describes the features and functionality of the BIGCenter 20.10.2 release. In this release, we added a button to the footer of Legacy BIGCenter that allows you to access our release notes. Additionally, we have also delivered bug fixes to our **API** and the **Programs, Projects, and Work Requests** workspaces.

Release Notes now accessible from Legacy footer

You can now access BIGCenter release notes using a button in the footer of Legacy BIGCenter. Click the **What's New** button to open the Online Help to the **What's New** page. The **What's New** button looks like a speech bubble with an exclamation point inside of it.

You may also remember that in the 20.05.2 release we added a **What's New** link in the menu in the header bar of the upgraded BIGCenter.

These two enhancements support our transition to in-app release notes only. As of the **20.11.2** release coming on **December 10, 2020**, we will no longer be distributing release notes via email. This enhancement means you will be able to access the release notes at your leisure while decreasing the volume of emails you receive about the product.

If you have any questions, please contact Accruent Support.

Improvements and issues fixed

In this release, we addressed client-specific enhancement requests and bug fixes. If an enhancement or bug fix in this release impacts your instance of BIGCenter, your Accruent representative will reach out to you.

Component	Summary
API	The API now checks to see if there are line items and allocations on an invoice or purchase order before allowing the invoice or purchase order to be approved.
Programs workspace	Budget transfers between projects at the program-level work as expected even if there are no budget categories on the projects.

Component	Summary
Projects workspace	The values in the General Ledger field in the Summary detail section now sort in ascending order by GL code when the detail section is in Edit -mode.
Work Requests workspace	The Event Log detail section now captures the correct user data on events.
